OF
SYSTEMS

OCTANORM 

ENVIRONMENTALLY
PROACTIVE.

ENVIRONMENTAL DESIGN BY TODAY'S STANDARDS MUST TAKE INTO ACCOUNT ITS EFFECT ON THE ENVIRONMENT.

The hot new trend in environmentally friendly design is old news to us. OCTANORM has provided "Green" products for over 30 years. Our structural systems are not new or experimental and were not solely created to address a recent trend. They have been in use for 3 decades all over the world and have always addressed the issues facing the environment.

IT'S BETTER TO BE PROACTIVE

From the beginning, OCTANORM set its sights on creating materials that were reusable. The fact that they are also recyclable is simply proof of our ongoing commitment to the "greening of the industry".

"GREEN" VS. "SUSTAINABLE"

OCTANORM products are not only "Green", they are "Sustainable". Imagine a building product that incorporates "cradle to cradle" technology. That's the advantage of extruded aluminium. And unlike other "green" products, you don't have to pay a premium to produce it. It's the most abundant metal found in the earth's crust and is 100 % recyclable.

What could be more sustainable than that?

OCTANORM USERS ARE ENVIRONMENTALLY CONSCIOUS

It all starts with design, and sustainable design begins with OCTANORM. Our products are in use by thousands of companies around the world and are recognized for their "green" qualities. Being an OCTANORM user means that you get:

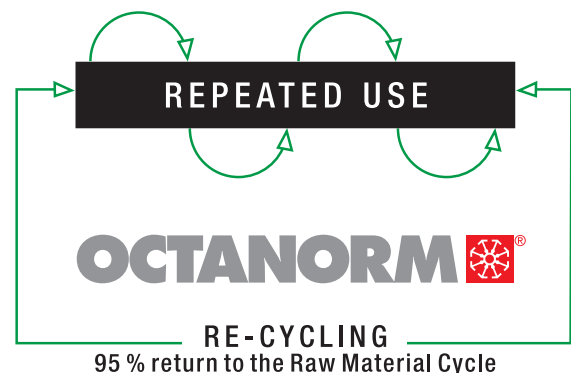

- Comprehensive service from experienced OCTANORM contractors.
- Products that can easily be customized.
- Modular design and construction.
- Products that can be used and re-used multiple times.
- "Buy-back" program of worn out components for recycling.
- Peace of mind that you are doing your part to preserve our environment.

WE HAVE THE EXPERIENCE OTHERS WANT

The OCTANORM formula for the environment encompasses two main requirements:

- Repetitive use of materials
- Recycling of materials into their original state

THE OCTANORM FORMULA FOR THE ENVIRONMENT

FUMI MASUDA

Director of EcoDesign Institute, Japan

“We should not sustain society as it is, but change society for sustainability.”

KEN PEATTIE

Director of BRASS Research Centre, Great Britain

“The sustainability agenda is like an undergraduate party.”

DR. BOB WILLARD

International Sustainable Business Expert, Canada

“Saving the world is not on the list of business opportunities.”

EDWIN DATCHEFSKI

Founder of GreenDrinks, Great Britain

“We should create harmony between the designed and the undersigned.”

URSULA TISCHNER

Director of econcept, Germany

“Designers should become incubators for sustainable solutions.”

.OCTANORM CONTINUES TO GROW SYSTEMATICALLY.

You do not become a market leader by accident but by performance and passion. We have put this belief into practice with great success for more than 40 years. OCTANORM is one of the world's leading manufacturers of aluminium systems and we will do everything necessary to maintain this position including, of course, sustaining our environmental policy.
